MaxiLED unique wiring example

All year round lighting system.
Used 365 Days per year.

Background

Liverpool City Council approached LITE with a project to replace a low end MiniLED product with a permanent solution in mind for the trees around the City. Their remit was to accommodate a permanent robust all year round lighting system, used 365 days per year and lighting the City Centre to create a welcoming, soft lighting to the City.

Design

Liverpool Council have a strict policy of only 24V lighting to be used within their trees, so were finding it increasingly difficult to find the balance between having a WOW factor impact with a 24V product to give them the longevity they were looking for.

Alan Jones, who at the time represented on behalf of the council via Amey, approached LITE to discuss our MaxiLED large and small globe festoon product due to the manufacturing quality and quality of the bright LEDs at 24V, IP68 and a manufacturing warranty of 5 years which no other product can come even close to matching and the fact we can manufacture to a bespoke size and quantity as opposed to an off the shelf product.

The feedback from the client has been nothing but praise for the huge impact our product has achieved around the City, which in turn has since led onto new projects we have also completed for private companies around Liverpool with this product.
