Controllable

MaxiDOT 180° Series

102 / 302 DMX controllable

KEY FEATURES

- 512 DMX RGBW Controllable
- IP67
- 180° Viewing angle
- Multi chip Cree® LED
- 48VAC Data over Power 2 wire system
- High Impact Acrylic Dome

MaxiDOT 102 180° series

MaxiDOT 302 180° series

Product Overview

Our MaxiDOT 180° series is available in two sizes, 102 and 302, the fitting is the perfect solution for most building facades. Delivering 180° viewing not only for marker light applications but for low resolution screen and matrix systems. Manufactured from quality materials and incorporating our Patented 2 wire data over power technology giving full DMX 512 control down the 2 power wires makes it the simplest to install and most cost effective product of its type in the market place today.

This product must be installed by a qualified electrician in accordance with all national and local electrical and construction codes.
Failure to comply with the installation instructions can result in serious injury or death.

MaxiDOT 102 180°
Maximum run distance

MaxiDOT 102 180°
Maximum fixture run

This product must be installed by a qualified electrician in accordance with all national and local electrical and construction codes.
Failure to comply with the installation instructions can result in serious injury or death.

MaxiDOT 302 180°
Maximum run distance

MaxiDOT 302 180°
Maximum fixture run

This product must be installed by a qualified electrician in accordance with all national and local electrical and construction codes.
Failure to comply with the installation instructions can result in serious injury or death.

1 Connect the End of Line Resistor

(a). Connect the End of Line Resistor Cable (Supplied Separately.) to the end of the 48V Data line after the last fitting.

NOTE: On the final lamp fitting an End of Line Connector MUST be Connected to allow the DMX data to 'Communicate.'
Without the End of Line Resistor the lamps will show DATA DISRUPTION
Connection is NOT Polarity Sensitive.

2 Data Disruption

(a). Once the system is powered up and the DMX 512 data transmission is available the end of line units will need setting.
Only perform this operation if the installation is flickering and not responding to the 512 DMX data transmission correctly.
Remove the Black Cap.

3 Fine Tuning 512 DMX data

(a). Using a Flat screw driver, turn the adjuster fully clockwise. The lights will begin to randomly flicker.
(b). Turn the adjuster anticlockwise until the installation responds correctly, once it responds correctly continue to turn the adjuster until the installation starts to flicker again when it does stop, turn the adjuster clockwise slightly.
(c). The adjuster is now set.

4 Check list

(a). Once the lights are tuned and correct, replace the End of Line Resistor Black cap. Ensure a tight fit for a waterproof seal.

(SEE INSTALLATION INSTRUCTIONS FOR POWER SUPPLY OPTIONS.)
